

PQM3000RGW

Class A rack 19" power quality analyzer with Rogowski coils

- Rack 19" mounting
- Current inputs for direct connection of Rogowski coils
- Harmonics and interharmonics measurement
- Data recording for further EN 50160 analysis
- Data recorded in standard PQDIF and CSV file formats
- Embedded web server
- Communication on Ethernet and 3G networks
- Included external GPS module for accurate timing
- Internal rechargeable backup battery
- Certified according to **IEC/EN 61000-4-30:2015 Ed.3**, Class A for voltage characteristics

» General features

PQM3000RGW is a high-end power quality analyzer, able to monitor and record the major power quality parameters. It provides an accurate measurement, voltage characteristics are monitored according to Class A specification. At the same time it acts as event/fault recorder, capable to store a high number of voltage events and disturbances, frequency variations, inrush current, etc. Additional PQ data can be recorded, such as Flicker, Unbalance, Harmonics and Interharmonics, Mains Signalling. It also provides standard power measurement data for three-phase systems. Extra voltage and current measurement channels give the possibility to monitor Neutral Potential and Earth Leakage current.

Innovative Rogowski coils are included together with the instrument to grant a complete measurement system as well as quick installation. Their current full scale can be programmed among three default values, simply selectable in the device setup, to ensure maximum flexibility even on existing plants.

The powerful recording features give the possibility to capture and record all types of standard and PQ data simultaneously. All this information can be recorded for long time period due to the high memory capacity, in this way a complete EN 50160 analysis can be performed. Events and disturbances provide also waveform recording together with RMS values. Recordings can be transferred in different ways: user can download them directly through web interface or set an automatic scheduled data upload to a remote server.

PQM3000RGW includes different communication ports so the user can access it in different ways. The Ethernet ports on the front and rear panels allow complete control on the instrument: web access for real-time monitor, device setup, stored data transfer, maintenance operations. The integrated mobile network router gives the possibility to manage the device by using 3G network if the Ethernet communication is not available. The RS485 port is dedicated to data reading of PQMGPS1, i.e. the external GPS module provided with the instrument. PQMGPS1 provides accurate time information regardless of the location where the meter is installed in a distributed monitoring system.

Moreover, different I/O channels are provided to enhance the instrument features. An user-friendly multilingual interface is provided for web server which simplify the full access to instrument operations.

» Benefits

- Additional voltage and current measurement channels in comparison with other standard three-phase devices.
- Rogowski coils included to grant a quick installation as well as an accurate current measurement.
- Continuous monitoring of the power quality and Class A certified measurements for voltage characteristics.
- Simultaneous recording of events, Min/Avg/Max LOG and energy counters.
- Several possibilities for instrument data transmission: Ethernet, Modbus TCP, 3G network.
- User-friendly instrument web interface with multilingual pages.

» Applications

- Power monitoring & control systems
- Switchboards, gensets, motor control centers, etc.
- Individual machine load monitoring
- Power demand analysis and management
- Harmonics monitoring
- Remote metering and cost allocation
- Motor inrush current studies

- *PQM-Analyzer* for data analysis according EN 50160

» Main features

Measurements

- Voltage direct connection up to 1000 VLL or through PT for MV and HV systems.
- 4th voltage channel for measurement of potential difference between Neutral and Protective Earth.
- 5 current channels to be used with the included Rogowski coils.
- 4th current channel dedicated for Neutral current, selectable in 3 different scales together with the three phase current channels (500 A, 3000 A, 20000 A).
- 5th current channel reserved for Earth Leakage monitoring, with separate current measuring range setup to ensure different sensitivity from the main channels (50 A, 500 A).
- Three-phase 3 and 4 wire or single-phase operating mode.
- Suitable for 50 and 60 Hz systems.
- Fast simultaneous sampling on all 9 channels, at 1024 samples/cycle.
- All measured voltage characteristics certified according to IEC/EN 61000-4-30:2015 Ed.3, Class A.
- Measurement of additional power quality parameters, such as K Factor.

Recordings & data storage

- Voltage event recording (sags, swells, interruptions) with storage of ½c RMS values and waveforms.
- Sag/swell recording on 4th voltage channel with storage of ½c RMS values and waveforms.
- Rapid Voltage Changes measurement and event recording.
- Power frequency variation monitoring and recording with ½c RMS values and waveforms.
- "Slow" event recording on Frequency, Unbalance Ratio, Flicker, Voltage THD and Mains Signalling variations.
- Overcurrent recording on three-phase current channels with storage of ½c RMS values and waveforms.
- Data LOG function for Min/Avg/Max values of selectable parameters, at programmable rate.
- Energy counter LOG at programmable rate.
- Functional event LOG to report the changes of device operating status, useful to keep the instrument condition under control.
- Digital input status change LOG.
- Automatic data upload to FTP server started by frequency events or scheduled at preset time day by day.
- Recordings containing big amount of data ½c RMS with waveform and Min/Avg/Max are recorded directly in standard PQDIF files.
- For other type of recordings, "slow" events, Energy LOG, Functional LOG, Digital input LOG, data is provided in standard CSV files.
- In case of a failure on the PQM auxiliary power line, the monitoring and recording functions remains active due to the backup battery.

Inputs & outputs

- 11 isolated digital inputs for remote management of control signals.
- 4 isolated analog outputs for real time parameter variation transmission.

Communication

- Two Ethernet ports, one designed for a permanent installation on the instrument rear and one for occasional connections on the front panel.
- RS485 port dedicated for GPS data reading.
- Integrated router for 3G mobile communication useful if Ethernet connection is not possible.

Data analysis

- Standard file formats gives the possibility to have a quick view and analysis on all stored data without any special software.
- PQM-Analyzer software is provided to perform statistical analysis and generate reports on recorded data according to EN 50160 PQ standard.

NOTES:

- Some of the parameters are not available for all functions, for more details refer to the user manual.
- LOG function means Min/Avg/Max recording, except for Energy counters (■).
- Parameters in MEASURE column can be displayed or read by communication port, except for Mean values (□).

» Specifications

POWER SUPPLY	
Auxiliary power voltage:	85...285 VAC 50/60 Hz / 65...250 VDC
Auxiliary power consumption:	15 VA max
Fuse:	250 VAC / 500 mA T type delayed
Backup battery:	Li-Ion, 2500 mAh (>15 min autonomy)
MEASUREMENT INPUTS	
Three-phase voltage inputs for direct connection / PT:	P-N: max 580 V RMS CAT III, L-L: max 1000 V RMS CAT III
U4 voltage input for direct connection:	max 580 V RMS CAT III
Voltage input crest factor:	2
Voltage input impedance:	>2 M Ω /phase
Current full scale:	selectable 500A, 3kA, 20kA RMS; for I5 50A, 500A
Current input crest factor:	3
Frequency range:	42.5...57.5 Hz / 51...69 Hz
Frequency reference channel:	Phase 1/Line 12 voltage
Sampling:	Simultaneous, 51.2 kHz @50 Hz
ACCURACY	
Three-phase voltage:	$\pm 0.1\%$ Un over 10 ... 150% Un range
U4 voltage:	$\pm 0.2\%$ measurement
Currents:	$\pm 0.2\%$ measurement (device)
Powers:	$\pm 0.2\%$ measurement
Frequency:	± 10 mHz
Harmonics:	Class 1 (IEC/EN 61000-4-7)
Realtime clock (RTC):	<1s in 24h without synchronisation; <5ms with GPS synchronisation
Active energy:	Class 0.5S, compliant to IEC/EN 62053-22
Reactive energy:	Class 1, compliant to IEC/EN 62053-23
I/O CHANNELS	
Digital inputs:	11 optoisolated, 24 VDC $\pm 20\%$
1PPS synchronisation input:	1 optoisolated, 24 VDC $\pm 20\%$
Analog outputs:	4 optoisolated, 4 ... 20 mADC, max load 500 Ω
Digital input delay time:	max 10 ms
1PPS input delay time:	max 50 ns
Digital input consumption:	max 7 mADC
1PPS input consumption:	max 1 mADC
Analog output reaction time:	max 200 ms
MEMORY	
System memory:	128 MB Flash, 256 MB RAM
Recording memory:	16 GB
COMMUNICATION	
Ethernet ports:	2 Auto MDIX RJ45 10/100 Base Ethernet
GPS port:	1 RS485 optoisolated, 9600 bps
GPS antenna (on PQMGPS1 module):	Active patch antenna, SMA connector
Protocols:	HTTP, HTTPS, FTP, SFTP, NTP, NMEA, Modbus TCP
Integrated router:	GPRS/UMTS-3G/HSPA
RTC SYNCHRONISATION	
Synchronisation system:	NTP and/or GPS
ENVIRONMENTAL CONDITIONS	
Installation and use code:	PQI-A-FI1
Operating temperature (limit range):	-25 ... +55°C (FI1, 3K6)
Storage temperature:	-25 ... +75°C (2K3)
Relative humidity:	95% max without condensing
Altitude:	max 2000 m AMSL
MECHANICAL CHARACTERISTICS	
Mounting:	Rack 19" 3U
Size:	Front (LxH): 482.6x133.35mm, Rear (LxHxD): 380x128x215 mm
Weight:	4000 g
STANDARDS	
Product compliance:	IEC/EN 62586-1, IEC/EN 62586-2
Certification:	Class A, IEC/EN 61000-4-30:2015 Ed.3 for voltage
Safety:	CAT III power supply, insulation class 2, 600 V
Directive:	2006/95/EC LV, EN 61010
EMC:	2004/108/EC EMC, EN 50081-2, EN 50082-2, EN 61326/A1, EN 55011:1998+A1:1999+A2:2002, EN 61000-6-2/-4-2/-4-3/-4-4/-4-5/-4-6/-4-11

LEGEND

GPS FOR SYNCHRO: External GPS module (PQMGPS1) for RTC synchronisation, provided with the instrument.

DI: 11 digital inputs for remote management of control signals.

AO: 4 analog outputs for real time parameter variation transmission.
